BIZCAPS

7 July 2009

Bizcaps solutions certified for GSInet Version 2.0

Bizcaps GSInet Connect Engine was today certified by GS1 for the recently implemented GSInet V2.0 platform. Bizcaps was the first solution to be certified when GSInet V1 was introduced in 2007. Bizcaps has continued its commitment to GSInet and the NPC, as of this date being the only product certified for all available industry verticals in Australia and New Zealand.

The GSInet Certification Program is designed to certify a product's ability to meet the local GSInet requirements for all engaged industry sectors. The industry sectors presently able to be certified are Grocery AU & NZ, Liquor AU, Liquor Industry Market Read (IMR) AU, Health AU, Auto Aftermarket AU and Office Supplies NZ. Middleware software suppliers servicing this market are

required to re-certify their software when significant changes are made to the GSInet platform.

A Bizcaps solution is all a supplier needs to validate, maintain and publish product data to GSInet and other datapools such as the NPC. Any updates to the GSInet requirements are generally invisible to Bizcaps clients with all upgrade requirements being handled by Bizcaps and supplied as part of annual maintenance arrangements.

The GSInet Connect Engine powers Bizcaps Enterprise and Eziform solutions. Enterprise and Eziform are part of a range of Product Data Management and Business Process Management software available from Bizcaps.
